

Corporate Data Platform Cost Analysis Report

Reporting period: September 2026

Environment: Production

Application: Customer Analytics Data Platform

Executive Summary

Total production cost for September was \$99,900, representing an 18% increase compared with August. Compute is the largest cost category. The primary contributor to the increase was higher batch-processing workload.

Monthly Cost Breakdown

Cost Category	September Cost	Change vs August
Compute	\$42,500	+22%
Storage	\$18,200	+8%
Data Processing	\$31,800	+21%
Network / Egress	\$7,400	+5%
Total	\$99,900	+18%

Workload Cost Details

Workload	Compute	Storage	Processing	Total
Customer Analytics	\$18,000	\$7,200	\$12,500	\$37,700
ETL / Batch Processing	\$15,500	\$5,800	\$14,800	\$36,100
Reporting Platform	\$5,000	\$3,900	\$2,800	\$11,700
Data Ingestion	\$4,000	\$1,300	\$1,700	\$7,000
Other	\$0	\$0	\$0	\$7,400

Top Cost Drivers

- Compute represents the largest cost category at \$42,500.
- ETL / Batch Processing increased significantly because of higher processing volume.
- Customer Analytics remains the largest individual workload by total cost.
- Network / Egress remains comparatively small but should be monitored for growth.

Optimization Recommendations

- Review batch-processing schedules and eliminate unnecessary repeated workloads.
- Evaluate compute sizing for workloads with consistently low utilization.
- Review storage retention policies for older analytical data.
- Investigate opportunities to reduce repeated data movement and network egress.
